

NEAUVIATM
ORGANIC

THE NEW 2ND
GENERATION OF HA
FILLERS

NEAUVIATM
ORGANIC

NEAUVIA®

TECHNOLOGY OF THE 21ST CENTURY SERVING MEDICINE

Neauvia Organic is the world's first line of fillers
so close to nature.

It has been developed using the latest
technologies, ensuring an unprecedented purity
and efficiency of preparations.

Pure raw materials and new production
techniques make *Neauvia* fillers stand out as the
new generation of products.

HYALURONIC ACID FROM BACILLUS SUBTILIS

Hyaluronic acid (HA) fillers owe their popularity to good results, low intrusiveness and safe application. However, there are rare cases where a patient's body reacts to them against expectations.

Why does this happen?

Currently, the most popular source of HA are laboratory strains of *Streptococcus*.

In fact, extracting the precious acid out of them requires the bacteria membrane breaking and application of chemical solvents. Contaminants present in the finished product are precisely the residues of bacteria and solvents. Despite several purifying processes, today's technology is unable to fully eliminate these impurities.

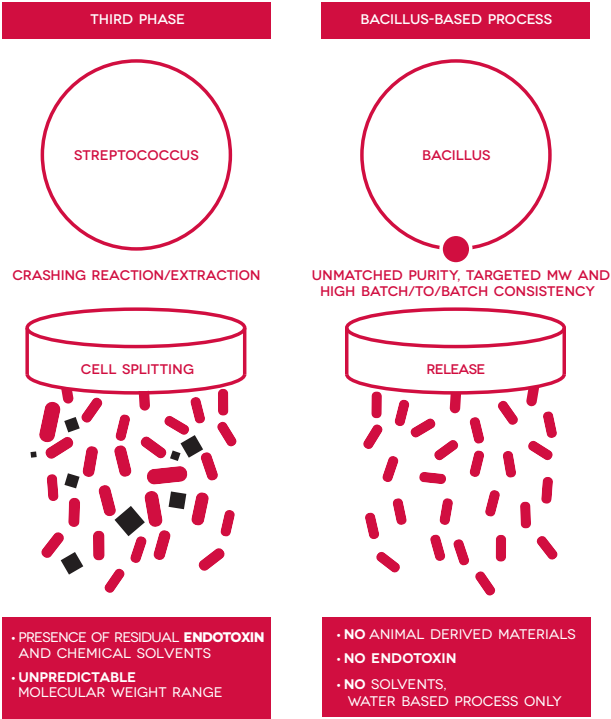

HYALURONIC ACID HAS NEVER BEEN SO PURE!

The purest form of hyaluronic acid currently available is obtained from *Bacillus subtilis*. This bacterium, which is non-pathogenic to humans, produces HA in a process based on water usage.

Unquestionable advantages of *Bacillus Subtilis* Hyaluronic Acid:

- Ultra purity
- High safety of application
- Pre-determined molecular mass
- Possibility to apply high HA concentration
- Long shelf life

CROSSLINKING WITH PEG POLYMER

Safety and effectiveness of fillers also depend on how they are stabilized. Usually BDDE (a crosslinking agent) is used for this purpose.

Due to its toxicity, it is assumed that the lower its content is, the safer is the product. However, low amount of cross-linker reduces longevity and performance in the tissue.

NO MORE CHOOSING BETWEEN SAFETY AND PERMANENT EFFECT

While others wonder how to reduce the content of undesired substances, the scientists working on *Neauvia Organic* fillers decided to apply a new crosslinker **PEG polymer** (not a common monomer like DVS or BDDE used in all the other products on the market). **PEG** is a well-known polymer on the pharmaceutical market, but it has been used for the first time in filler production by *Neauvia*.

PEG outstanding advantages:

- Not-toxic and completely degradable in the tissues
- Reduces the action of proteolytic enzymes, like hyaluronidase, increasing the longevity of the implant
- Stops the immunological reaction, as the implants is not recognized as a foreign body

PEG makes *Neauvia Organic* the most biocompatible fillers on the market reducing almost to zero the biopotential rejection of the hosting tissues.

IMMUNOLOGICAL SHIELD FOR SAFETY AND LONGEVITY

Protective action of **PEG** is able to mask the implant from the host organism reducing the risk of immunological reaction and formation of the foreign body giant cells (FBGC). In other words, **PEG** reduces inflammation and granulomas formation.

Moreover, it delays the degradation and the bioabsorption of the implant.

PEG makes *Neauvia* fillers the first, one and only **BIOMIMETIC** fillers worldwide.

FIRST PHASE

SECOND PHASE

REAL IPN TECHNOLOGY

FIRST PHASE

SECOND PHASE

THIRD PHASE

IPN stands for Interpenetrating Polymer Network, which is an innovative and advanced technology to combine two different polymers - here HA and **PEG** - in one network that gives outstanding mechanical, rheological and thermosensitive properties to *Neauvia* fillers. The use of this technology in *Neauvia Organic* fillers is possible thanks to **PEG**, which, unlike other current cross-linker agents, is a polymer.

These kinds of IPN structures can be degraded only with the break of the chemical bonds, which means that the filler is much more resistant to mechanical stress that is the first natural cause of the degradation of the implant.

The aim of IPN is to improve the weak properties of the single polymers; the combination of 2 polymers with IPN technique is improving both polymers performances. For instance, hyaluronic acid is a tremendously important component of our tissues, but really sensitive to heat! At certain temperatures, like the ones reached with aesthetic medicine treatments like lasers, ultrasounds or RF, any HA filler on the market is spoiled, besides *Neauvia* ones! **PEG** makes the HA much more resistant to heat, not limiting the range of aesthetic procedure available in beauty clinics and hospitals.

THE BEST RHEOLOGICAL RATIO ON THE MARKET

Thanks to **PEG** features and to a precise technique of determining the molecular weight of the HA, *Neauvia* fillers have the most optimal rheology - the ratio of three properties – on the market:

- **Cohesivity**: the attractive force acting between the molecules of a substance.
- **Viscoelasticity**: the ratio between Viscosity (the property of resistance to flow in a fluid/semifluid; adjacent layers move parallel to each other with different speeds) and Elasticity (the tendency of solid materials to return to their original shape after being deformed).
- **Plasticity**: the property to undergo permanent deformation under load.

The different and optimum rheology of each single *Neauvia* filler allows the substance to adapt itself to the receiving anatomic structures while, at the same time, keeping the desired shape for a long lasting aesthetical correction. *Neauvia* fillers are able to create the desired volume without inducing compression to the surrounding tissues, so always providing natural results.

Furthermore, there is absolutely no migration of the implant in the tissue, something unfortunately quite common with many other similar products on the market! This is always due to the use of **PEG** polymer which is really creating a totally different new concept of HA filler worldwide!

CALCIUM HYDROXYAPATITE SUPPLEMENT

The aging process gradually deprives skin not only of hyaluronic acid, but also of collagen; these precious substances, naturally produced by fibroblasts, are responsible for the skin's density and flexibility. Reduction of the amount of these substances cause the appearance of wrinkles and aged skin.

A solution that really prevents the aging process is a *Neauvia* filler with the unique combination of hyaluronic acid and calcium hydroxyapatite (CaHA), which is a naturally occurring mineral, safe for the human body that stimulates the process of neocollagenesis when placed in the skin. After application, the density and the elasticity of the skin are both improved, while obtaining the perfect volumetric effect from the HA and the best revitalizing effect from the CaHA.

Thanks to the small size and low concentration of CaHA molecules, *Neauvia Stimulate* fillers are extremely safe: CaHA particles are trapped in the polymer's clusters during the manufacturing process thus preventing their migration.

During the natural degradation of the product, there is the release of small particles of CaHA (between 8 and 12 microns only), few at times, that have the right size to stimulate fibroblasts in producing not only collagen, but also elastin, glycosaminoglycans and hyaluronic acid.

The R&D team at *Neauvia Organic* gave birth to a unique filler worldwide, the first ever with a double action - *Stimulate* - (see page 20) which provides volumization and collagen production at the same time! It is easy to understand that doctors and patients will experience longer lasting aesthetical correction due to the combined action of HA and CaHA.

Medical reports have shown that these particular *Neauvia* fillers, combining HA with CaHA, have more collagen production than any other HA filler and comparable to dedicated collagen stimulation products.

The use of CaHA is not a new concept on the market, but *Neauvia Organic Stimulate* is different from the other products on the market because of:

1. The small sizes of CaHA particles which do not interfere with phagocytes activities
2. The CaHA molecules which are gradually released during the degradation of the implant, not all at once
3. The safe and optimal concentration of CaHA, which is able to provide excellent results without creating side effects. Higher concentrations of CaHA, without any controlled release during the time, may lead to the formation of macromolecules of CaHA that starts the immunological reaction and the formation of capsules and granulomas.

INTENSE

BIO ACTIVE FILLER

BENEFITS

- High concentration of HA and high viscosity
- Ultra-safe profile thanks to *Bacillus subtilis* and **PEG**
- Optimal rheology properties giving remarkable and natural correction
- Slow biodegradation and long lasting results

This product contains a highest available concentration of hyaluronic acid - 28 mg/ml. Like all *Neauvia* fillers, it is made from the purest source of hyaluronic acid (*Bacillus subtilis*) and it is cross-linked with **PEG** polymer to obtain a 3D hydrogel matrix. *Intense* gives fantastic volumetric results shaping the injected area in a natural way. Thanks to unique rheological properties, *Intense* is highly adaptive to the tissue, which helps to achieve desired results. It is suitable especially to deep filling of skin depression (included deep wrinkles and nasolabial folds), cheeks, chin and nose modeling and face contouring, in moderate and strongly aged skin.

Concentration

28 mg/ml HA, cross-linked with PEG

Syringe

1 x 1 ml

Indication

Deep tissue restoration of volume & correction

INTENSE LV

BIO ACTIVE FILLER

BENEFITS

- High concentration of HA and high viscosity
- Ultra-safe profile thanks to *Bacillus subtilis* and **PEG**
- Optimal rheology properties giving remarkable and natural correction
- Slow biodegradation and long lasting results

This product contains an high concentration of hyaluronic acid - 26 mg/ml. Like all *Neauvia* fillers it is made from the purest source of hyaluronic acid (*Bacillus subtilis*) and it is cross-linked with **PEG** polymer to obtain an ipn technology. It gives fantastic volumetric results shaping the injected area in the natural way. Thanks to the advantages of IPN technology *Intense LV* is highly adaptive to the tissue which helps to achieve desired results. It is suitable especially to deep filling of skin depression (included deep wrinkles and nasolabial folds), cheeks, chin and nose modeling, face contouring, in moderate and strongly aged skin.

Concentration

26 mg/ml HA, cross-linked with PEG

Syringe

1 x 1 ml

Indication

Deep tissue restoration of volume & correction

INTENSE LIPS

BIO ACTIVE FILLER

BENEFITS

- Optimal amount of HA for natural effect and patient's comfort
- Highest quality raw materials (BSHA and **PEG**)
- Real 3D structure thanks to IPN technology
- Slow biodegradation and long lasting results

New product designed particularly for mucosa tissue. It contains 24 mg/ml of HA to provide optimal results in delicate lips area. Suitable for augmentation, contouring and revitalization of lips. *Intense Lips* users can be sure of its highest quality thanks to the usage of the safest materials in the production process (BSHA, **PEG**), as well as the advanced IPN technology offering extraordinary properties of the hydrogel. This dedicate preparation gives special elasticity to the plymer's chains and permit it to overcome the mechanical stress the lips are submitted . This improvement give a natural touch perception.

Concentration

24 mg/ml HA, cross-linked with PEG

Syringe

1 x 1 ml

Indication

Lips augmentation and modelling

INTENSE ROSE

BIO ACTIVE FILLER

BENEFITS

- High concentration of HA and high viscosity level for great volume effects
- The highest quality raw materials and safe use supported with clinical trials
- Unique products for specific indications
- Slow biodegradation and long lasting results

Concentration

28 mg/ml HA, cross-linked with PEG

Syringe

1 x 1 ml

Indication

Gynecological soft tissue correction, tissue augmentation, lipodistrofity correction

Out of concern for the intimate health and beauty, *Intense Rose* is dedicated to correcting lipoatrophy and tissue augmentation in private parts. It is characterized by the highest amount of hyaluronic acid - 28 mg/ml - and high viscosity of the hydrogel to guarantee 100% satisfaction for the patient. *Intense Rose* is a combination of efficiency, safety and longevity. Like all *Neauvia* fillers it is made using the purest hyaluronic acid available and cross-linked with PEG polymer to obtain an IPN technology.

STIMULATE

BIO ACTIVE FILLER

BENEFITS

- Unique combination of filling and biostimulation
- Significant improvement in skin density level
- Clinically proved results
- Ultra-safe profile thanks to *Bacillus subtilis* and **PEG**
- Slow biodegradation and long lasting results

Concentration
26 mg/ml HA, cross-linked with PEG

Syringe
1 x 1 ml

Contains
1% CaHA

Indication
Deep filling of skin depression (included deep wrinkles and nasolabial folds), biostimulation and revitalisation

Neauvia Organic Stimulate is a unique product, the only one which offers not only great filling effect but also a long term biostimulation. The 26 mg/ml of HA is complemented with 1% of calcium hydroxyapatite - a mineral occurring naturally in human body able to stimulate collagen production. *Stimulate* is a perfect choice every time when a patient is suffering from the lack of volume and density. The product immediately will fill the tissue deficits giving the desired shape and volume gradually improving the quality of the skin. The neocollagenesis process permits a longer lasting correction. *Stimulate* is made from hyaluronic acid derived from *Bacillus subtilis* and it is cross-linked by **PEG** polymer using a real IPN technology. Calcium hydroxyapatite used in *Neauvia* fillers has small particle size (8-12 microns) and is well spreaded in the cluster of the hydrogel. This assure stability of the particles that have no possibility to migrate.

RHEOLOGY

BIO ACTIVE FILLER

BENEFITS

- Natural correction of superficial and moderate wrinkles
- Collagen stimulation
- Visibly results in quality of the skin
- Ultra-safe profile thanks to Bacillus subtilis and PEG

Concentration

22 mg/ml of HA, cross-linked with PEG

Syringe

1 x 1 ml

Contains

Glycine and L-Proline

Indication

Fine line reduction, light corrections, orbital area, glabella

The new products in *Neauvia Organic* line, *Rheology* is dedicated for correcting first signs of aging: fine lines and superficial wrinkles especially in young skin. It is also suitable for lip's barre code correction, light lips correction and hands rejuvenation. It contains 22 mg/ml of hyaluronic acid derived from *Bacillus subtilis* and it is cross-linked with PEG polymer. In addition to hyaluronic acid it contains amino acids - Glycine and L-Proline - that are main ingredients of collagen.

HYDRO DELUXE

BIO ACTIVE REVITALIZER

BENEFITS

- High concentration of HA for great hydration
- Improvement in skin density level thanks to hydroxyapatite
- Regeneration, superficial wrinkles correction
- Visibly results in quality of the skin
- Ultra-safe profile thanks to Bacillus subtilis

Concentration

18 mg/ml of HA, non cross-linked

Syringe

2 x 2,5 ml (available soon), 1 x 1 ml, 1 x 5 ml

Contains

- **0,01% of CaHA**
- **Glycine and L-Proline**

Indication

**Hydratation, revitalization,
collagen stimulation**

Mesotherapy is one of the most popular aesthetic treatments that significantly improve quality of the skin. The aim of it is to deliver active substances directly to the skin and to give an immediate hydration.

The success of the treatment depends to a great extent from the quality of the product injected and the repeated sessions.

Neauvia Organic Hydro Deluxe contains 18 mg/ml of pure hyaluronic acid derived from *Bacillus subtilis*. Such high concentration allows to obtain very good results noticeable from the first treatment. It contains also 0,01% of calcium hydroxyapatite for additional collagen stimulation which makes the effects of the therapy even better.

A series of 4 treatments with 3 week intervals between all treatments should be performed to achieve optimal results. At the end of the series, in order to maintain results, it is worth offering the patient a follow-up treatment scheduled for half a year later.

NEAUVIA™
ORGANIC

FOR MAN

BIO ACTIVE FILLERS

INTENSE MAN

BIO ACTIVE FILLER

BENEFITS

- The highest concentration of hyaluronic acid for efficiency and longevity
- Unique worldwide product dedicated for men
- Highest quality raw materials (BSHA and PEG)
- Slow biodegradation and long lasting results

Concentration

28 mg/ml of HA, cross-linked with PEG

Syringe

1x 1ml

Indication

Restoration of volume, filling of skin depression (included deep wrinkles and nasolabial folds)

Being aware of the differences in the men and women tissue as well as their subjective expectation from the aesthetic medicine we are proud to present the first and unique product dedicated for men - *Intense Man*. A specific formula with the highest concentration of HA (28mg/ml) and high viscosity of this product suits perfectly for thicker skin and more rapid process of aging. *Intense Man* can be used to add volume in the sagging area and to fill the folds and deep wrinkles. Like all *Neauvia* fillers it was made from the purest source of hyaluronic acid (*Bacillus subtilis*) and cross-linked with **PEG** polymer (IPN technology).

STIMULATE MAN

BIO ACTIVE FILLER

BENEFITS

- Unique combination of filling and biostimulation
- High viscosity of the hydrogel for better adaptation to man's tissue
- Clinically proved results
- Ultra-safe profile thanks to *Bacillus subtilis* and PEG
- Slow biodegradation and long lasting results

Concentration

- 28 mg/ml of HA, cross-linked with PEG
- 1% of CaHA

Syringe

1x 1ml

Indication

Restoration of volume, filling of skin depression (included deep wrinkles and nasolabial folds), collagen stimulation

Processes of aging and skin structure of men differs from woman's and the results are different with the aging. Their ticker skin lose volume, density and elasticity of tissue. To reduce the signs of passing years and keep the young, energetic appearance it is important to treat it holistic. *Stimulate Man* is a first filler dedicated to help fighting the time in two ways. 28 mg/ml of hyaluronic acid and high viscosity of the hydrogel fill tissue deficits for a long time. The addition of 1% of calcium hydroxyapatite gives extra stimulation effect by activating fibroblasts to collagen stimulation. *Stimulate Man* is made from hyaluronic acid derived from *Bacillus subtilis* and it is cross-linked by PEG polymer using a real IPN technology. Calcium hydroxyapatite used in *Neauvia* fillers has small particle size (8-12 microns) and is well spread and cross-linked in the hydrogel. This assure stability of the particles that have no possibility to migrate.

DISCOVER NEAUVIATM COSMECEUTICALS RANGE

Complete your treatment with fillers using our new *Neauvia Cosmeceuticals*, a line of professional skin care products that prolong the effects of filler therapy.

Thanks to the special formulation using the most effective active ingredients the products have strong anti-inflammatory and anti-aging properties.

In the line there are products for a daily use as well as for professional therapies in the clinics and beauty salons.

INTENSIVE CARE AFTER AESTHETIC MEDICINE TREATMENT

Modern aesthetic medicine treatments provide patients with long-lasting improvement of appearance, resulting in a higher request of cosmetic treatments.

However, any invasive procedure may lead to different level of side effects associated with the damaging of the skin layers. No matter which treatment has been carried out, peeling or injection, it is important not only to respect the protocols, but also to minimize the discomfort and to reduce the recovery period.

Based on an advanced knowledge and researches about dermo-cosmetics, *Neauvia Cosmeceuticals* have been created to reduce both the inflammation after aesthetic medicine procedures and the aging process, even on the most sensitive and delicate skin.

All creams and serums of *Neauvia Cosmeceuticals* are enriched with 2 main ingredients:

1

3D HA Fractional System: an innovative concept obtained through a unique process that enriches products with HA molecules with 3 different ranges of molecular weight. Due to their nature, they penetrate different layers of the skin, giving birth to a 3D uniform structure in the skin: shorter chains will penetrate deeper than longer ones building up a homogeneous and effective system to restore the inflamed or aged skins.

Benefits:

- **Restoration and optimal hydration**
- **Aging prevention**
- **Healing properties**
- **Natural barrier for the skin: preventing aggressions and preserving the right nutrients**
- **Immediately visible effects**
- **Enhancement of skin brightness**
- **Improvement in skin texture,**
- **Improve Improvement in skin elasticity and tone**

2

Growth Factors: substances that stimulate cells division and growth, supporting the natural regeneration process; they are completely safe and do not cause allergic reactions. The complex of growth factors KGF (keratinocyte growth factor) & EGF (epidermal growth factor) used in *Neauvia Cosmeceuticals* promotes:

- *Renewal of the epidermis*
- *Rapid recovery of the optimal level of hydration*
- *Ability of the epidermis to retain moisture*
- *Restoration of the skin structure*
- *Enhancement of collagen and elastin synthesis*
- *Activation of the cell metabolism*
- *Promotion of intensive nutrition*
- *Activation of the natural protective function of the skin*

NEAUVIATM

RESTORE SYSTEM

A unique and professional system that triggers the biological process of skin renewal at the cellular level with slight exfoliation and restore action; the unicity is determined by the possibility to completely customize the treatments according to patients' needs that might change from session to session.

The effectiveness of the products is achieved by a specially selected range of acids (Peel vials) that gently exfoliates the dead skin cells and act in synergy with various moisturizing and regenerating active components (Active vials), all enriched with growth factors, that normalize the process of renewal of the epidermis, restore the hydro-lipid balance of the skin and stimulate the production of collagen and elastin.

Depending on different needs, doctors select and mix the correct Active vials and Peel vials (not more than 3), with the delivery mask (the peel-off mask included in the kit) and provide an effective and personalized treatment for any patient. The delivery mask, besides containing growth factors and fractional HA, is enriched with plant extracts, which have excellent calming and anti-inflammatory action reducing irritation.

Neauvia Restore System cannot be compared with any other peeling, because of the controllable impact both superficially and in depth. *Neauvia Restore System* is softer, more natural and gentle. It is not only exfoliating, but also regenerating the skin, giving it a strong lifting effect while activating the mechanism of cell regeneration, increasing the micro-relief and improving the complexion.

Already after the first treatment, patients enjoy a softer, smoother and brighter skin with a healthy color and natural glow. After completing a certain number of sessions, depending on the skin condition, patients will achieve long lasting results due to a prolonged action of collagen and elastin stimulation, which will result in hydrated and rejuvenated skin with improved elasticity and firmness.

Results:

Improvement of the skin tone and texture

Smoothing of the fine wrinkles and roughness

Hydration and rejuvenation of the skin

Brightness of the skin

Improvement in skin thickness

NEAUVIA[®]

RIGEN MASK – POST TREATMENT RECOVERY MASK

Neauvia Restore Rigen is a professional mask, which fights against all signs of aging, eliminating fine lines, providing lifting effect and protecting cells from photo-aging. It has a unique structure that, in combination with the active ingredients, “wakes up” the skin, effectively moisturizing and improving both skin tone and elasticity.

The mask consists of peptides and hyaluronic acid: Peptides imitate the effect of the growth factors that are naturally present in our skin, controlling the metabolism of the cells due to their regenerating, anti-wrinkle, anti-aging, and moisturizing properties.

Peptides (oligopeptide-1-2, polypeptide-1-3-5-9-11 and copper tripeptide-3) combined with collagen give lifting effect and prevent the appearance of new wrinkles.

Hyaluronic acid supports collagen synthesis, creating a protective layer on the surface of the skin and speeding up its regeneration.

Suitable for all skin types.

NEAUVIA™

HA FRACTION SYSTEM

Neauvia Cosmeceuticals creams have 5 different lines for different purposes and goals to archive; all products combine soothing, anti-inflammatory and strong

regenerative effects. Applied on a regular basis, they ensure an appropriate skin moisture level together with a brilliant and natural appearance.

1

REBALANCING LINE

Both male and female lines of creams are based on the 3D Fractional Hyaluronic Acid, a skin re-hydrating agent, which quickly penetrates the skin providing moisturizing. Furthermore, ATP-enzymes provide the skin cells with the necessary energy for their activities. At last, lenitive ingredients assure a great anti-inflammatory and calming effect. The line includes also some curative Make Up (3 colors) that ensure not only perfect coverage of the skin, but also soothing and regeneration properties.

2

VITAMIN C LINE

All *Neauvia Vitamin C* products contain the Ascorbyl-tetraisopalmitate that is the most stable and durable molecule of Vitamin C known in chemistry; it has an excellent percutaneous absorption and an important role as vital component for skin care and anti-aging. Vitamin C, with the antioxidant actions, reduces the intensity of the skin redness, strengthens blood vessels and improves skin color while stimulating the synthesis of collagen and protecting the skin from the adverse effects of sun exposure. The line contains also Coenzyme Q10 that protects skins at the cellular level together with a strong and effective mix of antioxidants. It has to be remarked that Vitamin C serum is the only product on the market with a 30% concentration of Vitamin C.

3

CONTOUR EYE LINE

Products containing only low molecular weight Fractional Hyaluronic Acid, which penetrates deeper in the skin with a highly moisturizing effect; both creams and serum have a very light texture for a quick absorption that improves skin elasticity, which is extremely important in case of sensitive and delicate areas. The line contains also 2 peptides providing an immediate lifting effect, something all patients are looking for in such product.

4

REJUVENATION ROSE

It is a delicate intimate gel for a daily use with a strong softening, hydrating and filling out effect, which accelerates the recovery process of the epidermis, so the gel can be applied also on the irritated skin. In addition, it preserves the natural pH of intimate areas - pH 4.5 - and enhances the protective properties of the mucosa. It is to be remarked that this gel is including both the EGF and KGF growth factors.

5

SILK BODY LINE

The products are suitable for body care. Growth factors, both EGF and KGF, stimulate the cell replication and activities, slowing down the aging process. Silk proteins smoothen the skin, providing an extremely pleasant sensation to the touch. The particular composition of the serum makes the product absolutely not sticky, so it does not damage clothes.

AESTHETIQUE MEDICINE SPECIALIST

Krzysztof Miracki

CERTIFIED AESTHETIC MEDICAL DOCTOR, ENT AND LASER SPECIALIST

"When 25 years ago I have started to practice aesthetic medicine, the range of possible defects corrections had been very limited. Luckily, thanks to incredible progress in this field, today we have choice between numerous tissue fillers, including new Neauvia Organic line. This products includes well known and safe properties of hyaluronic acid in the purest possible form and calcium hydroxyapatite, which stimulate body to collagen production. Thanks to this features Neauvia product are highly innovative, give natural and long lasting effect and, what is the most important, are safe for patients".

Dr. Andrzej Ignaciuk

AESTHETIC MEDICINE SPECIALIST

"Dear colleagues, I am dermatosurgeon and specialist in esthetic medicine. During my professional experience I had use many different products including HA fillers. After I discover Neauvia I feel secure

and satisfied. Why? Because this product has the best safety profile on the market - no single side effect reported by doctors. Because of the new type of HA extraction based on water and new cross linking process based on polyethylene glycol (PEG) replacing BDDE. At the same time, using Neauvia I cover all patient expectations - good feeling and volumizing effect immediately after the procedure and long lasting effect, thanks to tissue stimulation due to calcium hydroxyapatite. As a prolonged effect I observe collagen and elastin production, as a result of fibroblast stimulation. So, if you want to discover the magic of the new type of HA filler, combined with calcium hydroxyapatite, become a member of a team of Neauvia injectors."

Dr. Doncho Etugov

DERMATOSURGEON

"The new generation fillers Neauvia are very strong competitor among represented offers in the market. Neauvia products are covering extensive skin anti-age indication spectrum and allow perform the procedure at the highest level. The quality and price level correlates with the advancement of science".

Dr. Med. Agnese Ruskule

AESTHETIQUE MEDICINE SPECIALIST

“Neauvia is derived from the world’s first and only recombinant manufacturing process which is based on fermentation of safe and nonpathogenic bacterial strain *Bacillus subtilis*. The resulting sodium hyaluronate material is characterized by an unmatched purity and particularly low amounts of nucleic acids, proteins, bacterial endotoxins, and microbial contamination which are believed to reduce hypersensitivity reactions when the material is injected either as linear or crosslinked HA. The ultrapurity and reproducible molecular properties of BSHA (*Bacillus Subtilis* Hyaluronic Acid) and the new PEG crosslinking can indeed contribute to the safety, consistency, and robustness of final products”.

Prof. Nicola Zerbinati

SPECIALIST IN DERMATOLOGY & VENEROLOGY
ASSISTANT PROFESSOR, UNIVERSITY OF VARESE ITALY

“The most important aim of modern aesthetic medicine is not only to have good effect but also to choose the best instruments. Neauvia Organic line connects safety of the patients with natural, long lasting results. I especially appreciate working with Neauvia Organic Stimulate which combines the purest form of hyaluronic acid with calcium hydroxyapatite thanks to what it fills the tissues and stimulates collagen production”.

Paweł Kubik

AESTHETIQUE MEDICINE SPECIALIST

“I have been using Neauvia products ever since they had first appeared on the market, and now I use them on a daily basis. I favor Neauvia because it offers a wide variety of products, which I can use to suit the needs of many of my patients. The advantage of using these agents comes from the fact that I can be assured of a patient’s safety and wellbeing. I can use it to achieve excellent, natural, and long lasting effects due to the organic nature and biocompatibility of the substances. Over time the more I use it the more I become convinced of its superiority when compared to other hyaluronic acid agents”.
